

## Parking smarter is simple

### „SmartHome“ electronic operating systems

SmartHome, the electronic operating system from KLAUS Multiparking, lets our customers enjoy convenient parking and exiting. Even our TrendVario semi-automatic parking system can now be conveniently operated via smartphone.

This is made possible by our „Park & Smile Air“ app, which is available free of charge for both iOS and Android. This SmartApp can be used on any number of mobile phones, making it possible to request a parking space from home or while on the road. Customers can thus park or exit without extended waiting times or having to leave their vehicle.
